

LAN-LINK 1000.[®] The Maestro of Ethernet Bridges.

For perfect orchestration of all your multi-vendor data traffic.

Like a great conductor, the LAN-LINK 1000 will bring together all the parts of your LANs and make them work in perfect harmony. Regardless of vendor or protocol, our bridge will join your LANs and maintain the optimal performance of your networks.

That's why the LAN-LINK 1000 is the leading Ethernet Bridge (Baseband or Broadband) on the market. It provides protocol independent data transfer and address sensing with a 10Mbps throughput — everything you'll ever need to ensure peak network performance on your extended LAN.

Along with these important features, the LAN-LINK offers sophisticated network

monitoring capabilities and an automatic back-up configuration.

The LAN-LINK 1000 is a learning bridge which automatically adapts to all your network changes, with no external software required. At just \$6200, a comparable value does not exist anywhere in the LAN equipment market.

Microwave Bypass Systems is the leader in LAN Extension. Whether you're connecting LANs in the same building or miles away, we can provide you with a solution to fit your budget and network needs.

Call us for more information on the most cost-effective and efficient LAN Extension systems available. We know the score.

*And ask about our Etherwave Transceiver,
a microwave interface for 10Mbps LAN
Extension between facilities blocks or
miles apart.*
